

Bra Underwire

Material: Stainless steel

Thickness: 1.8MM/2.0MM/2.5MM

Shape: V-shape, U-shape, Y-shape, W-shape, arch-shape, arc-shape, etc.

The shape, size, and wire thickness can be customized.

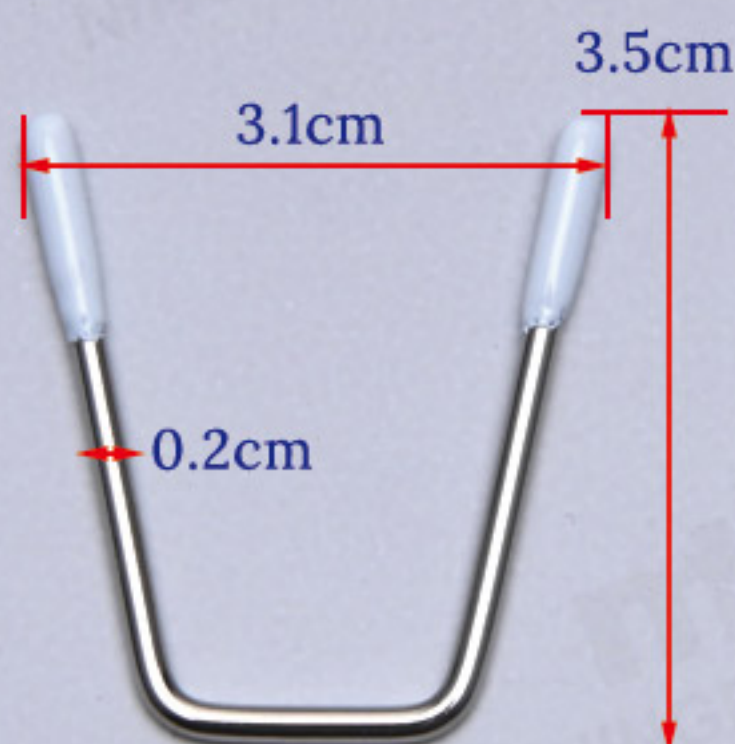

Advantage:

1. Durable and sturdy, good elasticity, resistant to fold and bend, soft and not easy to break.
2. Fine workmanship, no burr on the edge, smooth to the touch, scratch-resistant and wear-resistant.
3. Various models, with different underwire types achieving varying effects. Standard radian size, better bearing capacity and comfortable to wear, not easy to deform.
4. Both ends of the underwires are covered with a thick layer of eco-friendly nylon to prevent piercing through fabric and protect the clothes.

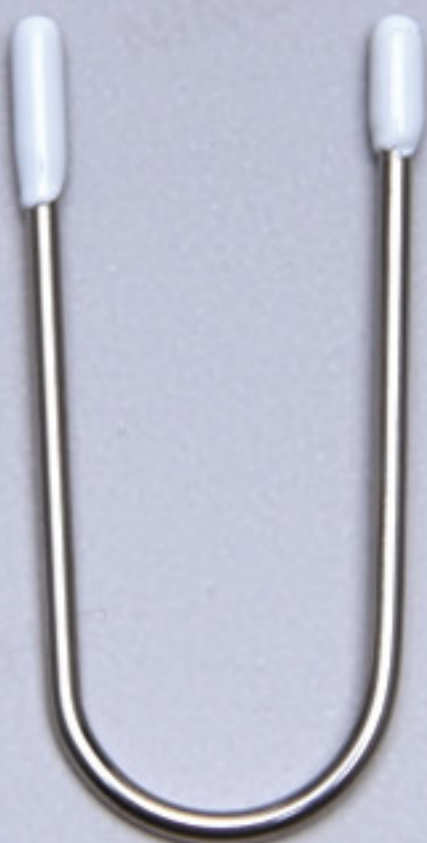

Usage: It's mainly used in underwear, swimsuits, dresses... to gather and support the chest, making the chest shape more plump and more stylish.
